

**GRESANIA**CERAMICA  
COLECCIÓN | COLLECTION 10 • 11

## environment

Grespania boasts environmental management system structured and certified according to guidelines of the ISO 14001 standard.

This means the business has the correct mechanisms to detect, identify, evaluate and control all potential environmentally harmful production aspects

Grespania tiles are 100% recyclable.

Grespania tiles are manufactured with clays and other inorganic raw materials sourced from natural mineralogical deposits.

Grespania tiles are chemically inert

Grespania internally recycles all water used in its' production process at the Nules plant and then purifies and reuses it at the Castelló'97n plant

## energy

Execution of energy audits throughout all Grespania plants with strict saving measures and energy efficiency implemented

Grespania uses a cogeneration turbine to create its own electricity with which it can obtain a considerable reduction of CO2 emissions and a higher optimisation of one thermal heat produced by the turbine for the atomization

Compliance with the Kyoto protocol (greenhouse gases) The use of Grespania porcelain tiles for ventilated facades insulates thermally 30% more than other materials

## packaging

Grespania employs recycled material for its' packaging  
Grespania packaging is designed to use the minimum level of material

## environnement

Grespania compte d'un système de gestion d'ambiance, structuré et certifié suivant les directrices de la norme ISO 14001

Ceci suppose pour l'entreprise de disposer de mécanisme pour détecter, identifier, évaluer et contrôler tous les aspects relatifs à l'activité productive susceptible de provoquer des altérations à l'environnement.

Les carreaux céramique de Grespania son 100% recyclables.

Pour la fabrication il est utilisé des argiles et autres matières premières inorganiques obtenues de gisement de minérales naturelles.

Les carreaux céramique de Grespania sont chimiquement inertes.

Chez Grespania, toutes les eaux du processus de fabrication sont recyclées intérieurement, Rejet 0 à l'usine de Nules, et sont dépurées et réutilisées au maximum dans celle de Castellon.

## energie

Réalisation des audits énergétiques dans ses usines et implantation de mesure d'économie et efficacité énergétiques.

Grespania utilise une turbine de cogénération pour créer sa propre énergie électrique, avec laquelle elle conçoit, entre autre chose, une diminution considérable de CO2, et un grand apport thermique de la chaleur produite par la turbine pour son procès d'atomisation. En accord avec le protocole de Kyoto (gaz à effet de serre), l'utilisation des carreaux de grès-cérame de Grespania en façade aérée, isole des températures extérieur, un 30 % de plus que les autres matériaux.

## emballages

Utilisation de matériel recyclé pour la confection des emballages.

Les emballages de Grespania, sont dessinés pour utiliser le plus petite quantité possible de matériel.

## umweltschutz

Grespania hat das Qualitätszertifikat ISO 14001.

Dies bedeutet, dass die Firma nach Richtlinien arbeitet und Instrumente einsetzt, welche den Umwelteinfluss der Produktionsabläufe einschätzt, überprüft, aufdeckt und auch vermindert.

Grespania Fliesen sind 100 % wiederverwertbar

Grespania Fliesen werden aus Tonerde und anderen nicht-organischen Rohstoffen hergestellt, welche aus Naturgruben gewonnen werden.

Grespania Fliesen sind chemisch neutral

Das im Produktionsverfahren verwendete Wasser wird intern aufbereitet und im Werk Nules zu 100% und im Werk Castellón fast vollständig aufbereitet.

## energie

Energieverbrauchskontrollen an allen Produktionsstätten der Grespania und Einführung von Energieeinsparungs- und Energieoptimierungsverfahren. Grespania verwendet eine Kraft-Wärme-Kopplungs-Anlage zur Erzeugung von Eigenstrom, wodurch u.a. eine beachtliche Reduzierung von CO2- Emissionen gewährleistet wird und die von der Turbine produzierte Wärme für den Atomisierungsprozess eingesetzt wird. Einhaltung des Protokolls von Kyoto (Treibhauseffekt) die Verwendung von Feinsteinzeug bei Fassaden ermöglicht bis zu 30% zusätzlicher Wärmeisolation im Vergleich zu anderen Materialien.,

## verpackungen.

Grespania Verpackungen werden aus wiederverwertbarem Material gewonnen

Grespania Verpackungen benötigen ein Minimum an Verpackungsmaterial

## medio ambiente

Grespania cuenta con un sistema de gestión ambiental estructurado y certificado según directrices de la norma ISO 14001.

Esto supone para la empresa disponer de mecanismos para detectar, identificar, evaluar y controlar todos los aspectos relacionados con la actividad productiva susceptibles a provocar alteraciones al medio ambiente.

Las baldosas cerámicas de Grespania son 100% reciclables.

Se fabrican utilizando arcillas y otras materias primas inorgánicas obtenidas de yacimientos mineralógicos naturales.

Las baldosas cerámicas de Grespania son químicamente inertes.

En Grespania, todas las aguas del proceso de fabricación se reciclan internamente, Vertido 0, en su planta de Nules, y son depuradas y reutilizadas al máximo en su planta de Castellón.

## energía

Realización de auditorías energéticas en sus plantas e implantación de medidas de ahorro y eficiencia energética.

Grespania utiliza una turbina de cogeneración para crear su propia energía eléctrica, con la que consigue, entre otras cosas, una reducción considerable de emisiones de CO<sub>2</sub>, y un elevado aprovechamiento térmico del calor producido por la turbina para su proceso de atomización.

Cumplimiento con el protocolo de Kyoto (Gases de efecto invernadero)

El uso de las baldosas cerámicas porcelánicas de Grespania en fachadas ventiladas aísla

Térmicamente un 30% más que otros materiales.

## embalajes

Uso de material reciclado en la elaboración de los embalajes

Los embalajes de Grespania, están diseñados para utilizar la menor cantidad posible de material.

características técnicas technical characteristics / caractéristiques techniques

Es un innovador proceso tecnológico de impresión digital mediante el cual se pueden decorar superficies cerámicas. Esta nueva técnica permite entre otras cosas:  
Decorar con calidad fotográfica (Alta definición)  
Número ilimitado de piezas diferentes en una misma serie.  
Impresión en la totalidad de la superficie (Biseles, altos y bajos relieves)  
Mayor respeto por el medio ambiente, ya que proporciona un ahorro considerable en tintas, fijadores, disolventes, así como pantallas, rodillos, etc..

This is pioneering, state of the art technology taking ceramic design and manufacture on to a different level. This new innovative form of glazing ceramic and porcelain material uses 'digital injection printing advancements' which, amongst other advantages allows for:  
Photographic design applications in high resolution on the surface of ceramic and porcelain material  
Unlimited number of COMPLETELY different pieces in each range obtaining a much more natural look  
The total glazing of 100% of the surface of the tile regardless of its structure be it FLAT,ondulated or with heavy clefting  
A much greener method of manufacture with less use of inks, no need for screens, rotocolour rollers and other materials employed in other methods

G-ink ist ein technisch innovatives, digitales Druckverfahren, mit welchem Keramikoberflächen dekoriert werden können.

Diese neue Technik ermöglicht unter anderem :  
Design in fotografischer Qualität (hohe Auflösung)  
unbeschränkte Anzahl von völlig verschiedene Fliesen in einer Serie

Die Glasur wird auf die gesamte Oberfläche der Fliese verteilt, ohne unglasierte Ränder zu hinterlassen (Fliesen mit Facetoptik sowie reliefierte Oberflächen).  
Bei diesem Druckverfahren ist eine höhere Umweltverträglichkeit gewährleistet, da eine erhebliche Einsparung von Farben , Fixier- und Lösungsmitteln, so wie auch von Druckschablonen, u.s.w. gegeben ist .-Grespania Verpackungen benötigen ein Minimum an Verpackungsmaterial

C'est un procès technologique innovateur d'impression digital avec lequel nous pouvons decore des surface céramique.

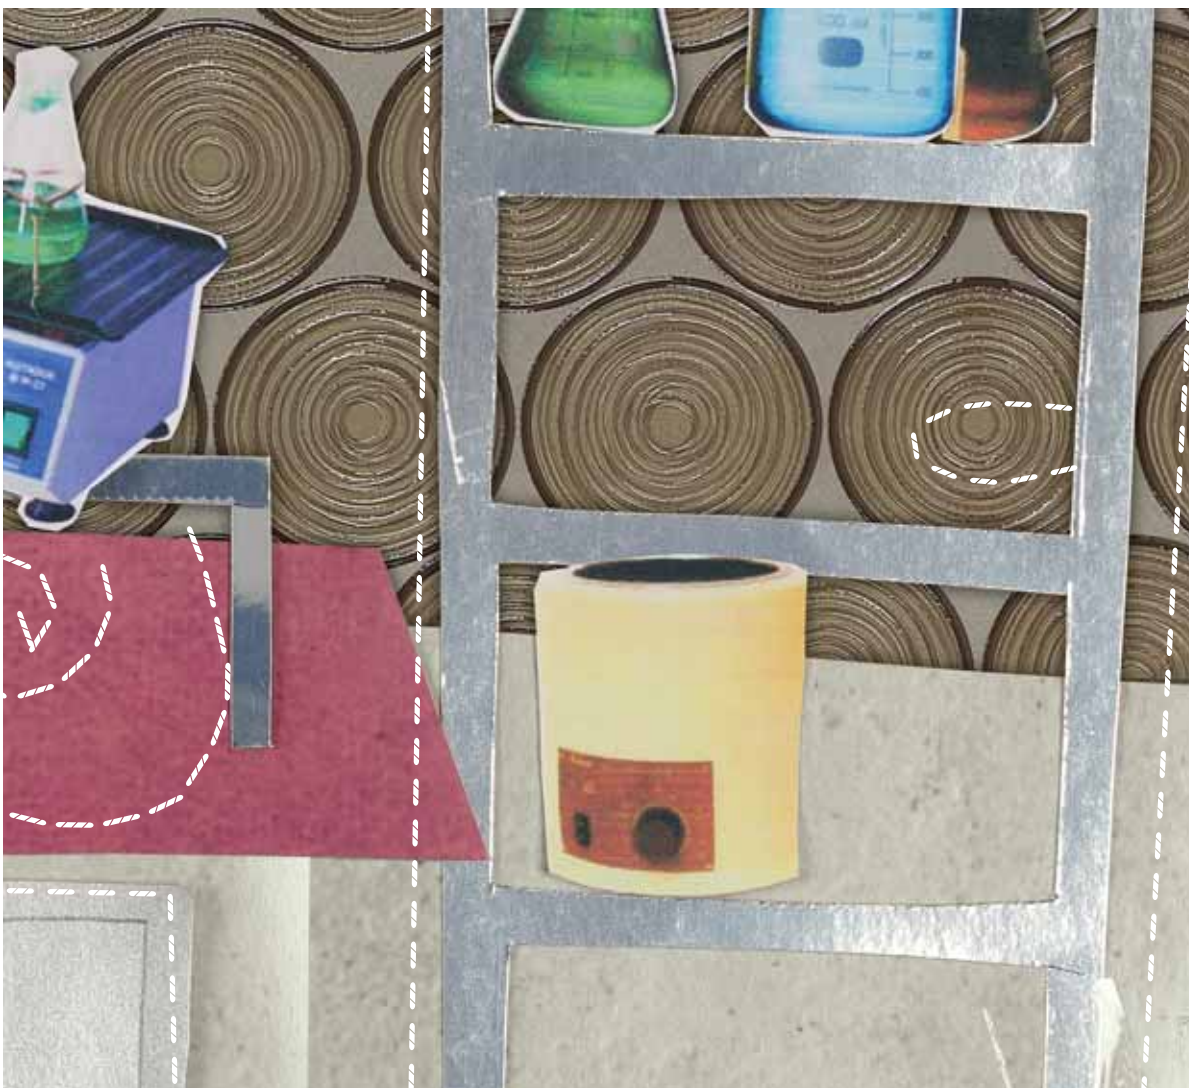

Cette nouvelle technique nous permet entre autre:  
Décoré avec une qualité photographique (Haute définition)

Un numéro illimité de pièces différentes dans une même série

Impression sur la totalité de la pièce (Biseaux, haut et bas relief)

Un plus grand respect pour l'environnement, vu que ceci nous fait un économie très importe de l'encre, fixateur, dissolvants ainsi comme écrans, rouleaux, etc...

String side / Zanquin / Stufensockel

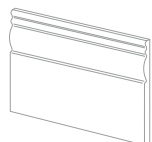

1 Torelo  
Beading / Moulure florentin / Wulst

4 Peldaño de Gres Torelo  
Peldaño Porcelánico Torelo  
Step tread / Nez de marche / Stufe

5 Peldaño Gres Angular Torelo  
Peldaño Porcelánico Angular Torelo  
Square step tread / Angle florentin / Eckstufe

2 Zócalo  
Skirting tile / Zocalo / Wandsockel

Peldaño Porcelánico Escuadra  
Step tread / Nez de marche / Stufe

Peldaño Porcelánico Angular Escuadra  
Square step tread / Angle nez de marche / Eckstufe

3 Rodapié  
Skirting tile / Plinthe / Sockel

Peldaño Porcelánico Técnico Romado  
Step tread / Nez de marche / Stufe

Peldaño Porcelánico Técnico Angular Romado  
Square step tread / Angle nez de marche / Eckstufe

**A-A\***

**Absorción de agua (ISO 10545-3)**

Water absorption / Absorption eau / Wasseraufnahme

Se utiliza el método de ebullición, en el que se sumerge la baldosa. El coeficiente de absorción de agua se calcula como el cociente entre la diferencia de la masa húmeda y seca, y la masa seca. The boiling method is used, in which the tile is submerged. The coefficient of water absorption is calculated as the quotient of the difference between the wet and dry mass, and the dry mass.

**R-CH-T\***

**Resistencia al choque térmico (ISO 10545-9)**

Resistance to thermal shock / Resistance choc thermique / Tem. stoss

Se somete a la baldosa entera a diez ciclos de variación de temperatura entre +15°C y +145°C. A whole tile is subjected to 10 cycles of temperature variation between +15°C and +145°C.

**M\***

**Resistencia a las manchas (ISO 10545-14)**

Resistance to staining / Taches / Flecken

Se mantiene la cara vista en contacto con diversas soluciones de ensayo, limpiando sus superficies con métodos de limpieza definidos, y examinándolas para detectar cambios irreversibles de aspecto. Se clasifican del 1 (mancha persistente) al 5 (mancha eliminada).

The outer face of the tile is kept in contact with several assay solutions, then cleaned using specified cleaning methods, and examined to detect irreversible changes of appearance. These are classified between 1 (persistent stain) and 5 (stain eliminated).

**Aditivos piscina**

Pool additives / Additifs piscines / Schwimmbadzusätze

**PEI\***

**Resistencia a la abrasión (ISO 10545-7)**

Resistance to abrasion / Resistance a l'abrasion methode PEI / Abriebfestigkeit nach PEI

Se somete la baldosa esmaltada a una rotación de una carga abrasiva sobre su superficie, y luego se valora el desgaste por comparación visual de las ensayadas con las no ensayadas. La clasificación es de V (defecto visible a más de 12.000 rev) a 0 (visible a más de 100 rev). The glazed tile is subjected to the rotation of an abrasive material on the surface, and then the wear is determined through visual comparison of the tiles with unworn controls. The classification ranges from V (visible defect after more than 12,000 rev) to 0 (visible after more than 100 rev).

**Resistencia a la abrasión profunda (ISO 10545-6)**

Resistance to deep abrasion

Se determina, para baldosas no esmaltadas, la pérdida en mm<sup>3</sup> de material eliminado de la baldosa al hacer incidir tangencialmente a la misma, un disco rotativo al que se le alimenta con material abrasivo.

This is determined, for unglazed tiles, in terms of the loss in mm<sup>3</sup> removed from the tile after tangential pressure from a rotating disk fed with abrasive material.

**R\***

**Resistencia al deslizamiento (DIN 51130, ASTM C-1028 y ENV-12633)**

Slip resistance

Al no estar normalizado el ensayo, existen múltiples de los que vamos a utilizar los 3 mencionados.

- DIN 51130 (método de la rampa ó R). Se determina el ángulo crítico de deslizamiento (que nos da el valor de R) mediante el pavimento de una rampa inclinable en la que está una persona con botas de suela Std e impregnadas con aceite. El ángulo en el que sufre el primer deslizamiento, es el crítico. Según el valor de este ángulo, le corresponderá un valor de R (de R9 a R13). A mayor ángulo, mayor R..

- ASTM C-1028 (coeficiente estático de fricción). Consiste en determinar la fuerza mínima, tangencial a la superficie en ensayo de un deslizador normalizado que porta una carga de 22Kg. Se realiza sobre una superficie seca y luego saturada de agua. Así obtenemos los coeficientes en seco y en húmedo, fd y fw .

- ENV-12633 (método del péndulo). El ensayo utiliza un péndulo que tiene un deslizador de caucho que en función del ángulo alcanzado después de contactar con la superficie de la baldosa, nos dará la clase de la baldosa. Se clasifican de clase 0 (menor resistencia al deslizamiento) a clase 3 (mayor resistencia).

Since there is no fully standardized test, a number of methods exist, of which we will use the following three:

- DIN 51130 (Ramp or R method). The critical angle of slip (which gives the value R) is determined by paving a variable-angle ramp on which a person stands wearing boots with a Std sole soaked in oil. The angle at which they start to slip is the critical angle. The value of R (from R9 to R13) is determined by the size of this angle. The greater the angle, the larger the R.

- ASTM C-1028 (static coefficient of friction). Consists of determining the minimum necessary force, tangential to the test surface, to move a standardized slider supporting a load of 22 kg. It is carried out on a dry surface and then after saturation with water. We thus obtain the dry and wet coefficients fd and fw .

- ENV-12633 (pendulum method). The test uses a pendulum fitted with a rubber slider, which gives the slip class of the tile according to the angle attained after contact with the tile surface. The classification ranges from 0 (least slip resistance) to 3 (greatest resistance).

**R-F\***

**Resistencia a la flexión (ISO 10545-4)**

Resistance to flexion / Resistance flexion / Biegefestigkeit

Se aplica una fuerza a una velocidad determinada en el centro de la misma, estando el punto de aplicación en contacto con la superficie de la cara vista de la baldosa.

A force is applied at a predetermined velocity in the centre of the tile, the point of application being in contact with the outer face of the tile.

**R-C\***

**Resistencia al cuarteo (ISO 10545-11)**

Resistance to cracking / Resistance fendege / Rissfestigkeit

Se determina la resistencia a la formación de fisuras sometiendo baldosas enteras al vapor, a alta presión en un autoclave, y examinándolas con la aplicación de un tinte.

Resistance to fissure formation is determined by subjecting whole tiles to steam at high pressure in an autoclave, and examining them with the application of a dye.

**R-HE\***

**Resistencia a la helada (ISO 10545-12)**

Resistance to freezing / Resistance gels / Frostbeständig

Después de empaparlas con agua, se someten las baldosas a ciclos entre +5°C y -5°C. Todos los lados de las baldosas son expuestos a la congelación durante un mínimo de 100 ciclos de congelación - deshielo.

After being saturated in water, the tiles are subjected to cycles ranging from +5°C to -5°C. All sides of the tiles are exposed to freezing for a minimum of 100 freezing/thawing cycles.

## Series rústicas

En la fabricación de estos productos tratamos de obtener piezas diferentes, tanto en tonalidad como en aspecto, con el fin de hacer una instalación del producto con un conjunto rústico y natural.

Para su instalación recomendamos:

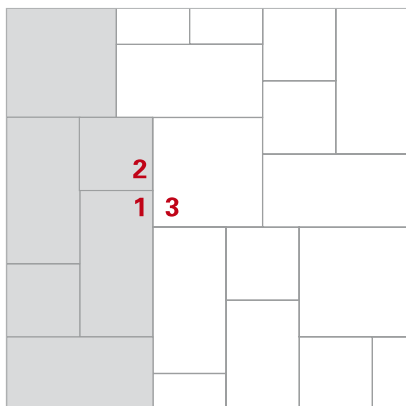

- 1) Colocar simplemente piezas de 3 ó 4 cajas diferentes, con el fin de mezclar bien los distintos aspectos.
- 2) Instalar el producto con una junta de separación no menor de 3 mm.

## Rustical series

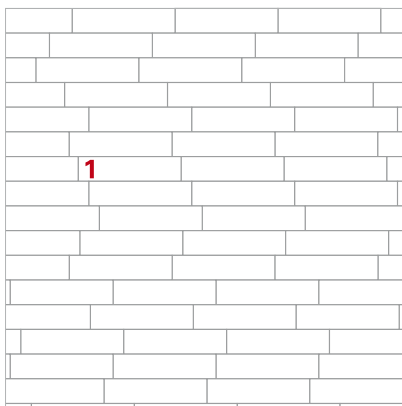

The variations in shade and appearance of the different pieces contained in each box are produced on purpose in order to obtain the desired rustical effect.

For its installation, we recommend the following instructions:

- 1) Place simultaneously pieces from 3 or 4 different boxes in order to mix the various appearances and shades.
- 2) Install the product with a separation joint not less than 3 mm.

## Séries rustiques

Dans la fabrication de ces produits, nous essayons d'avoir des pièces différentes aussi bien dans la tonalité que dans l'aspect, a fin d'obtenir après la pose du produit une ambiance rustique et naturelle.

Pour sa pose nous vous recommandons de:

1) Poser simultanément des pièces de 3 ou 4 boîtes différentes, a fin de mélanger les différentes aspects.

2) De poser un joint de séparation d'au moins 3 mm.

## Rustikale serien

Bereits in der Produktion werden Fliesen mit unterschiedlichem Charakter hergestellt. Dadurch wird der natürliche und rustikale Stil der Serie Slate erreicht.

Zur Verlegung empfehlen wir:

1) Verlegung aus mehreren Paketen, damit eine optimale Mischung der verschiedenen Farbtöne erzielt wird.

2) Die Verlegung sollte mit mindestens 3 mm. Fugenbreite erfolgen.
