

BLEND OF TEXTURES

Surfaces with a grating effect relief combined with metallized natural textures and discreet details of white marble represent the most advanced and avant-garde proposal offered by Vives Cerámica for developing new interior design projects.

It is based on blending three series: Nadir, Boreal and Sideral, manufactured with 40 x 60 cm porcelain tile that both match and bring out the best of each other's features.

The elegant shades and effects of the Nadir relief surface, a faithful reflection of the traditional grating are blended with the attractive and original metallic effects of Boreal and the natural white marble texture that characterizes the Sideral collection.

A conjunction of colours and chromatic effects that creates a fascinating combination of optical textures and sensations.

Graphite colours, metallized grays, bronzes, wengue browns, ochres, streaked white... nature tonalities, elegant, discreet with great beauty.

They are combined and blend together to offer us infinite possibilities for decoration that show the upcoming esthetic product lines.

With this collection, Vives Cerámica shows us its capacity of innovation and the firm commitment to more avant-garde trends.
