

KUATRO CASCADE Ramon Soler®'s eco-efficient waterfall

Today our bathroom is not only an area which we can use for personal hygiene, it has been converted into the heart of the home, a refuge for peace and calm where we can find a moment of intimacy. Without a doubt, the waterfall tap is the showpiece of these bathrooms because it reminds us of the natural course of water and the connection between man and nature.

With the new kuarto single mixer from **Ramon Soler®** we will have a waterfall in our own home. As well as having clean architecturally inspired lines we can combine the perfection of the cleanest design with the most up to date bathrooms.

With the pureness of its straight lines this collection allows our bathroom to have a natural luxury: observing the movement of water which flows through the spout and falls into the basin in the form of a natural waterfall.

It is a common belief that when we have a cascade tap in our bathrooms that we waste precious water. **Ramon Soler®**, conscious of water saving and sustainability, incorporates a system which controls pressure saving water. Kuarto cascade has a 2.5 litre per minute flow rate at a stable temperature, resulting in this line being one of the most eco-efficient in the **Ramon Soler®** catalogue.
