

DualShower RLC 2 by Ramon Soler® Wellness in a rain and waterfall shower

Showerheads often give us sensations of pleasure in our daily shower. The new **DualShower RLC2** showerhead offers a great amount of wellness to its users due to the two types of effects it offers: rain and waterfall. These types of showerheads are focused to give the user relaxation and comfort. The rain effect is very relaxing and the waterfall tones up the body and adds special vitality.

Dualshower RLC 2 is a wall mounted shower produced in chromed brass and steel.

Design: The **DualShower RLC 2** with its round, pure forms combines with all types of faucets including bath and shower tapware: from taps with sharp angles to soft and round forms.

RLC 2 is a coherent and correct option for any bathroom because it has a lineal shape and adapts to any modern bathroom.

The external measurements are 55cm x 23 cm. The waterfall zone presents a system of micro holes with an anti-limescale function which occupy a surface area of 22 x 18 cm. The **RLC 2** offers a generous and refreshing waterfall 15cm wide. The flow rate is regulated at 14 litres/minute via filters and special limiters, which contribute to energy saving.

EASE OF INSTALLATION. The **RLC2** is easy to install as there are no wall recessed pieces needed. All one has to do is bolt the shower to the wall.

DualShower RLC 2 converts the morning shower into the best moment of the day.
