

RAMON SOLER®'S SPECTACULAR TERMOKUATRO TAP

With spectacular design and the latest technology, **Ramon Soler®** offers a new tap sporting the purest lines and right-angles; the thermostatic built-in tap in the **Termokuatro** series.

The tap, which consists of a single chrome plate measuring 21 x 21 cm, with thermostat control and flow distributor, can be installed in all today's varied showers, with massage jets, overhead sprinkler, hand shower head, bath accessories...

The thermostat function in this centralised mixer enables the user to adjust temperature quickly (less than one second), ensuring maximum comfort by reacting instantly to alterations in external conditions so that the user does not even notice temperature changes.

And if the cold water supply is cut off, an “anti-scalding” system provides complete safety, making this tap particularly recommendable for children, the elderly, and people with disabilities.

The **TermoKuatro** is also fitted with the exclusive S2 water-saving system, though it also allows a for large water flow when required, such as for systems with many side jets or large overhead showers.

With the new **TermoKuatro** built-in plate, **Ramon Soler®** adds an element of modern design to taps that also provide the best in comfort, safety and security.

Ref. 6724 S Series TermoKuatro
